Materials science is one of the fastest growing fields in technology. Almost every day, advanced materials with new or improved properties emerge, giving impetus to technological progress. The wide range and uses of new materials has prompted the international conference on Materials and Tribology.

The aim of the conference is to provide an opportunity for technologists to present recent progress in research, development and applications of advanced materials, tribology and related disciplines. The conference draws together high calibre academics and experts industrialists to work towards developing practical solutions for materials and tribological problems and initiating new innovations in this area.

MATRIB'04 promises to provide a wealth of knowledge for those working in the field of materials and tribology.
